

Dear Sir or Madam,

I graduated in electronic engineering at the Federal University of Rio de Janeiro, one of the most prestigious schools in Brazil. Afterwards, I got my Master's Degree in the same institution, in Computer Science (Artificial Intelligence). At the beginning of my career, I worked as a developer, bringing to life a SaaS Project Management Tool. But soon after I went on pursuing a managerial career, due to market characteristics.

In this new path, I worked as a project manager mainly focused in the customers' needs. In Israel I've been also dealing with customers in other languages, such as Spanish and Portuguese, besides English.

I'm making my change back to a technical role. Lately, I've been brushing up a lot of skills including programming (C, Python, C++, and SQL), calculus (single and multivariate), linear algebra, probability, statistics, among others.

I'd be really happy to discuss this opportunity with you. I've got all the soft and managerial skills that are of much use in a technical environment, and I also got a curiosity that pushed me to study new subjects all my life.

I'm willing to start again in a junior position and I'd be glad if I could take any technical assessments or technical tasks so you can evaluate my level in the aforementioned fields.

Best regards,

Daniel Levitan
